

YOUTUBE LINK FOR EXPLANATION EVERYRTHING :

https://www.youtube.com/watch?v=_ogbllYCq2s

IF YOU DON'T WANT TO WATCH THE VIDEO, PLEASE READ THIS:

- 1--Unzip the file that I sent you.
- 2 --Open this file in VS Code, or any other IDE for Java.
- 3--Then, write this command in the terminal/console: `cd src`
- 4--After you write this in the terminal, just type `make` in the terminal and the code will be compiled and run. That's all.

IMPORTANT NOTES:

If you want to change the map (e.g., `wumpus_world.txt`, `wumpus_world2.txt`, etc.), go to the Wumpus class (`Wumpus.java`). In the constructor, there is a variable named "Filename". Just change this variable to the name of the map you want.

My code can be played either as a human or by the computer. To make the game human-playable, go to the WumpusHeuristic class (`Wmp_Heuristic.java`) and change `wumpus.run_A_start()` to `wumpus.run()` in the main function.

That's all. You can also watch the video where I explain how to do it.
