

Hello, I am Emre, an Erasmus student.

I am currently in my second year of bachelor's degree at the university. That's why it was challenging for me, as a bachelor's degree student, to create a master's degree project. I hope you like my project; I did my best with my bachelor background.

Everything is explained in the YouTube video. Please click the link and watch it:

LINK ---> [<https://www.youtube.com/watch?v=dCA5Yi4Bwgo>]

IF YOU DONT WANT TO WATCH TO VIDEO , JUST WATCH THESE STEPS:

- 1--| Unzip the file which I send you as zip***
- 2--|Open the project from any ide , visual studio or intelij ide ,doesn't matte***
- 3--|After open the project , open the consol / terminal. Write ls to see what is inside the project***
- 4--|You should see : README , REPORTS AND src folder.***
- 5--|After you see these , get into source file via cd src command. Ex : cd src***
- 6--|Then you can check by pwd if you got into the src file. Ex : pwd***
- 7--|Now , the only thing you should do is writing make. Ex : make***
- 8--|After you write 'make' to terminal/console , the program is gonna start.***

Kind Regards.

Emre.
